ZAALS FINANCE

**NFT-Native Capital Formation and Reward
Distribution for DePIN.**

NAME OF PROJECT:
Zaals Finance

PRESENTED BY:
Karthikeya Gundumogula

PRESENTED TO:
Turbin3 Tribe

Agenda

03	Overview
04	Protocol Architecture
05	Use-Cases
06	Future Roadmap
07	Team

01 Connects capital with decentralized infrastructure
Brings investors and node operators together without intermediaries.

02 Turns capital into transferable on-chain positions
Investments are represented as NFTs that can be held or transferred.

03 Automates rewards, rules, and accountability
Reward sharing, locking, and penalties are enforced by the protocol.

03/10

Overview

Decentralized protocol that coordinate capital for decentralized infrastructure networks (DePIN).

Objectives and Goals

Zaals Finance is designed with three clear goals in mind:

Goal # 1

Enable trustless capital formation
Allow node operators to raise funds
transparently with predefined rules.

Goal # 2

Protect capital providers
Lock capital safely, distribute
rewards fairly, and prevent misuse.

Goal # 3

Create a foundation for ICMs
Make infrastructure funding
programmable, composable, and
transferable.

Protocol Architecture

05/08

Zaals Finance is built around a phase-based vault lifecycle that controls how capital moves, earns rewards, and exits – all enforced by on-chain rules.

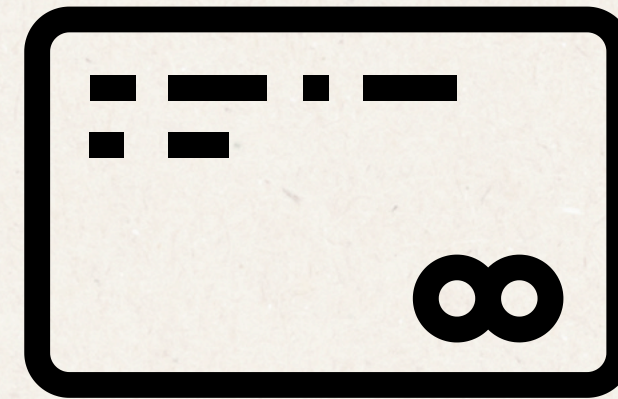

Phase-Based Design

The protocol operates in three clear phases: Formation, Active, and Closed, each with strict rules on what actions are allowed.

Vault-Centric Capital Management

All capital and rewards flow through a vault that enforces locking, reward splits, and withdrawals automatically.

NFT-Based Ownership

Every capital deposit mints a Position NFT, representing ownership of locked capital and future rewards.

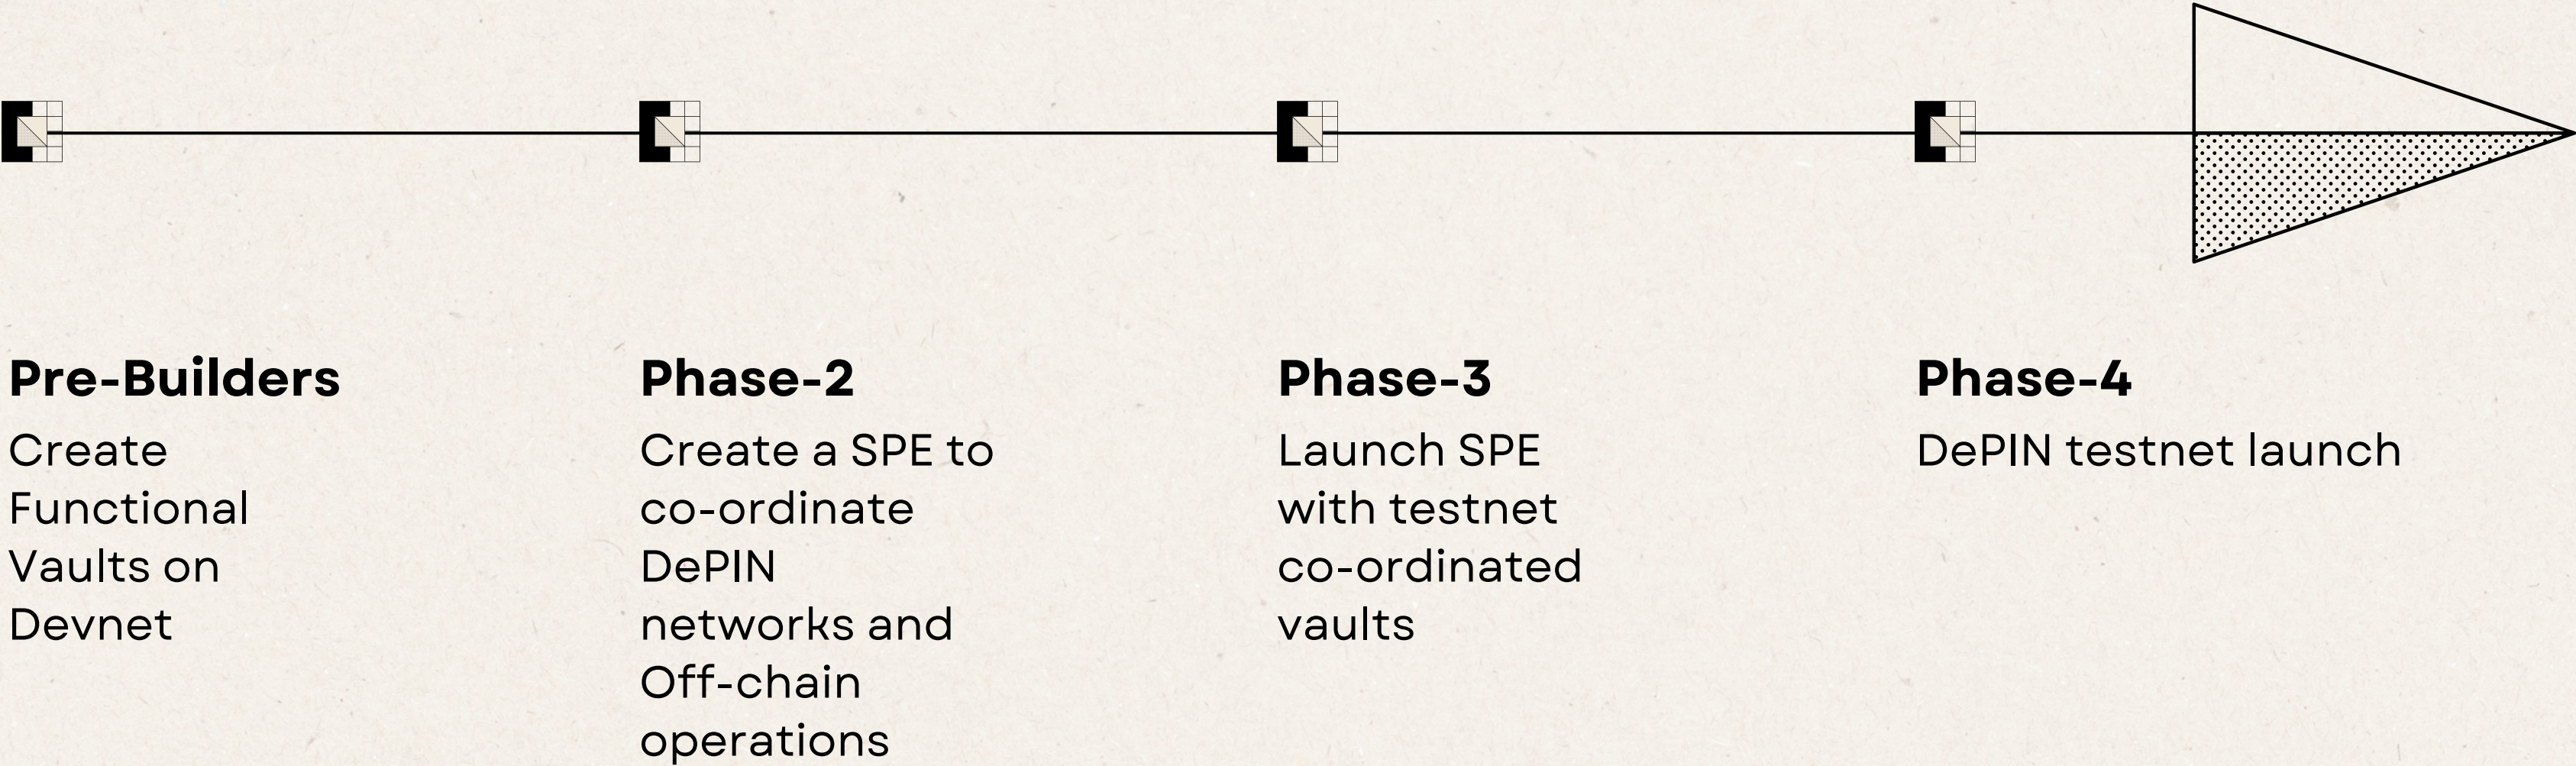

Dispute-Aware Reward System

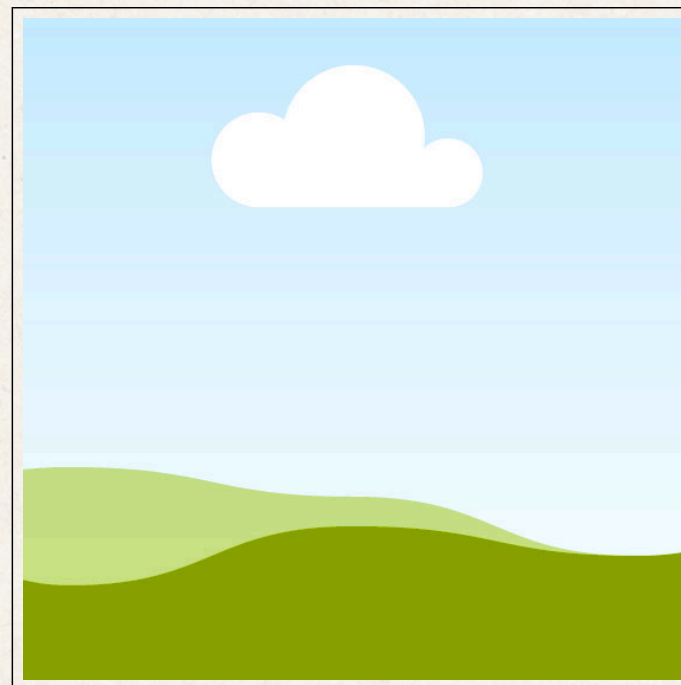

Rewards flow continuously, but claims pause during disputes to protect capital providers.

Timeline

06/08
